

PRODUCTION GUIDELINES FOR 1 HECTARE OF CABBAGES & OTHER BRASSICAS

Cabbages are widely adapted to a wide range of weather conditions hence they can be grown throughout the year in most regions

Cabbages may be planted by direct seeding or transplanting of seedlings. Direct seeding may require up to 2kgs of seed.

Plant spacing: Large headed cultivars 60 - 70cm between rows and 45cm within rows, small to medium headed cultivars 60cm between rows and 30cm within rows Seedlings should be transplanted as soon as they reach the desired size. Populations of 40 - 45 000 plants/ha and 55 - 65 000plants/ha are ideal depending with the cultivars For baby cabbage populations of between 80 000 - 100 000 plants per hectare are recommended. Only well hardened yound, stocky plants should be used at planting Cabbage thrives in well drained moisture retentive loamy soils well supplied with organic matter, ideal soil Ph ranges from 5.5 - 6.5

Optimum temperature for growth and development is between 18 - 20 degrees celsius, it is fairly resistant to frost and can survive at very low temperatures without damage

Fertilizer requirements		Product	Rate/ha	Nitrogen	Phosphate	Potash	Sulphur	Application Remarks
Basal dressing	Agricura Compound C	5:15:12	600kgs	30	90	72		All at transplanting
OR								
Basal dressing	Agricura Blend/High C	6:28:23	500	30	140	115		
Top dressing	Potassium nitrate	13:0:46	200kgs	26		92		Split apply at 4 and at 6 weeks after transplanting
	Ammonium Nitrate	AN 34.5% N	100kgs	35				Apply at 3 weeks after transplanting
			Totals	121	230	279
